EDUCATION

Vellore Institute of Technology, Bhopal
B.Tech in Computer Science — Specialization in AI & ML

Bhopal, MP
Sept. 2023 – Present

Jesus And Mary Sr. Sec. School
Senior Secondary

Bikaner, RJ
2021 – 2023

Delhi Public School
Schooling

Bikaner, RJ
2010 – 2021

PROJECTS

SpringBoot E-Commerce | *Java, Spring Boot, Spring Data JPA, MySQL, React*

June 2026 | [Live](#) | [GitHub](#)

- Built a full-stack e-commerce REST API with Spring Boot and Spring Data JPA, supporting full CRUD operations (add, search, update, delete) and multipart image upload/storage.
- Implemented a keyword-based product search endpoint using JPA derived queries, returning fast, real-time results as the user types.
- Deployed the backend on Render with a managed MySQL instance and the React frontend on Vercel, using environment-based configuration to separate local and production database credentials.

ResumeOS | *React, TypeScript, Next.js, TipTap/ProseMirror, Python, FastAPI*

Nov 2025 | [GitHub](#)

- Building a resume-editing tool with a rule-based Python/PyMuPDF pipeline that reconstructs document structure — headings, bullets, multi-column entries — directly from uploaded PDFs without relying on ML.
- Designed a shared JSON document model consumed by both a React/TipTap-based editor and a separate Playwright-driven PDF export service, keeping the editing and export layers decoupled.

E-Waste Wise | *Next.js, TypeScript, Tailwind, Google APIs*

Feb – Apr 2024 | [live](#) | [GitHub](#)

- Built a full-stack AI web app using Next.js and Google Gemini API to generate device-specific e-waste disposal guidance in seconds.
- Integrated Google Maps Places API to surface nearby recycling and donation centers, cutting manual lookup effort for users.
- Designed a responsive, theme-aware UI with shaden/ui and Tailwind, using conditional routing to serve Indian resale platforms (OLX, Cashify).
- Deployed on Vercel with zero-config CI, keeping iteration time under 2 minutes from push to live.

Neural Network from Scratch | *Python, NumPy*

Jan 2024 | [GitHub](#)

- Built a fully connected neural network in Python without ML frameworks to classify handwritten MNIST digits, achieving 95%+ accuracy.
- Implemented forward and backpropagation by hand using NumPy matrix ops, translating gradient descent calculus into working code.
- Validated understanding of weight initialization, activation functions, and learning rate effects through direct experimentation.

COURSES & CERTIFICATIONS

Coursera | *Applied Machine Learning*

- Supervised & unsupervised learning, model evaluation, scikit-learn pipelines, and feature engineering.

TECHNICAL SKILLS

Languages: Python, JavaScript/TypeScript, C/C++, SQL, Java, HTML/CSS

Frameworks & Libraries: React, Next.js, Node.js, Spring Boot, Flask, Tailwind, pandas, NumPy, Matplotlib, TensorFlow, PyTorch, Fastai

Tools & Platforms: Git, GitHub, Google Cloud Platform, Vercel, Render, Linux, VS Code, Neovim
